

Student Performance Prediction

Problem Statement: Predict student performance early on using machine learning based on their historical data and results, enabling timely interventions.

Data Set Details:

Our data set includes student evaluation details, covering demographics, attendance, past academic performance, and online resource engagement.

Step-by-Step Process:

- 1. Import Necessary Libraries:** Set the stage with the right tools.
- 2. Import Data Set:** Dive into the student data pool.
- 3. Handle Null Values:** Replace those sneaky nulls with mean values.
- 4. Categorical to Numerical:** Transform categorical data into numerical brilliance.
- 5. Model Building:** Choose your weapon - classification or regression.
- 6. Train & Test:** Split, train, test - the classic dance for model perfection.
- 7. Performance Unleashed:** Witness the magic as student performance reveals itself.

Project Submission Details:

- 1. Create a Drive:** Craft your drive labeled with your 'email ID' and give access to "operations@vidyanth.com"
- 2. Upload Jupiter Files:** Pop in all the project goodies.
- 3. Send Email To:** "operations@vidyanth.com"
 - **Subject Line:** "Mini Project: Student Performance Prediction"
